## Our Model

At Eyonic Systems we are dedicated to simplifying technology. Our services are a great value because they are flexible and provide on-demand scalability.

- Offering responsive technology services for people and businesses saving them time and money.

- We build our technology services to help people with any level of experience save time.

Our Carbon Footprint

To lower the environmental impact while still providing stable cloud services, a solar photovoltaic solution was implemented in September 2012 to offset energy utilization.

Eyonic Systems Inc.

Managed IT & Cloud Services

Business Infrastructure Design & Maintenance

Keeping an eye on IT essentials.®

Services

Business Infrastructure
Design & Maintenance

Our Services Areas are:

- Security
- Servers
- Virtualization
- Wireless & Mobility
- Email
- Storage Technologies
- Switching & Routing
- Voice

For more information visit: http://www.eyonic.com/solutions/products/business–infrastructure

Security

Firewalls are the first line of defense in providing network security, but security goes much further than this alone.

Servers

It is critical for servers to be reliable and available at all times. We can help maintain existing servers, as well as deploy new servers to replace outdated equipment to accommodate the demands of business growth. We work with the following server types: Exchange, SQL, File & Print and Linux.

Virtualization

From virtualizing complete data centers, applications, or creating a virtual desktop infrastructure, we can help you plan and deploy your virtual environment. Some benefits are optimized usage, easy management, quick recovery, dynamic resource allocation, scalability and automated failover.

Wireless and Mobility

We can help deploy or troubleshoot wireless controllers and APs for the best coverage and bandwidth utilization; provide wireless heat maps to visualize your WiFi infrastructure; and implement mobile device management to ensure device security is maintained.

Email

Email is the lifeline of almost every business. From communication to exchanging documents to keeping records, we can manage Microsoft Exchange and Office 365 deployments, migrations, backups and recovery.

Storage Technologies

SAN and NAS appliances are critical to any reliable and scalable environment and play an important role in your business infrastructure. We can help you understand and choose the best storage solution so you do not outgrow your environment too quickly or spend too much on unnecessary capital expenses.

Switching and Routing

Switches and routers are the necessary backbone for communication. Configuring access lists, VLANs, and QoS for VoIP where needed, will help best utilize your bandwidth and keep traffic secure.

Voice

Voice communication is critical for any business. VoIP is often the best voice communication because it is reliable and scalable, implementations are seamless, and costs a fraction of traditional on–site PBX systems.
